APPLICANT: Joseph Bryan, Lydia Aguilar Bryan, Daniel Nelson
TITLE OF INVENTION: Sequence Encoding Mammalian Sulfonylurea Receptor
Patent No. 6031150
TITLE OF INVENTION: and Method of Detecting Persistent Hyperinsulinemic Hypoglycer
TITLE OF INVENTION: Infancy
NUMBER OF SEQUENCES: 49

Sequence 4, Application US/08476900A Patent No. 6031150 GENERAL INFORMATION: APPLICANT: Joseph Bryan, Lydia Ac

RESULT 3 US-09-471-803A-6

Sequence 13729, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: AUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TILE REFERENCE: 107196.136
CURRENT FILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                              Score

The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties. The present sequence represents an oligonucleotide clone DNA sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published-pct-sequences. (Updated on 27-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to oligonucleotide clones originating in barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype ransformation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone DNA sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at fig. wipo.int/pub/published-pct-sequences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACF39600 standard; cDNA; 6672
  The present invention describes a compound (I) that is 8-50 nucleobases in length: (a) targets a nucleic acid molecule encoding major histocompatibility complex (MHC) class II transactivator, and specifically hybridises with the nucleic acid encoding the MHC class II transactivator; and inhibits the expression of MHC class II transactivator; or (b) specifically hybridises with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding MHC class II transactivator. (I) has immunosuppressive, antimicrobial, antidiabetic, antirheumatic, antiarthritic, cytostatic, nootropic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         multiple sclerosis; severe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              29-SEP-2003
                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotides for modulating MHC class II transactivator gene expression, particularly useful for treating autoimmune disorders such as transplant rejection, Alzheimer's disease, or multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-DEC-2002; 2002WO-US038616
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-JUN-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bennett
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO2003050247-A2.

The MHC class II transactivator antisense oligonucleotides can be used for treating an animal having a disease or condition associated with MHC class II transactivator, e.g. autoimmune disorder or infection. The antisense oligonucleotides can be used for inhibiting the expression of MHC class II transactivator in cells or tissues. In particular, these diseases include transplant rejection, diabetes, rheumatoid arthritis, cancer, Alzheimer's disease, multiple sclerosis, or severe combined immunodeficiency disease. The antisense compounds are useful for disgnostics, prophylaxis, or as research reagents or kits. The present sequence encodes a human MHC class II transactivator, which is used in an example from the present inventic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6672 BP; 1392 A; 1954 C; 1868 G; 1458 T; 0 U; 0 Other:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      creating a Propionibacterium acnes protein. The invention also relates to encoding a Propionibacterium acnes protein. The invention also relates to complypeptides encoded by the polypucleotides (ABM35624-ABM64336) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a complypuble of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the comprising a comprising a comprising a comprising a comprising a comprising a comprising a comprising a comprising comprising a comprising comprising a comprising comprising a comprising comprising comprising comprising colls prepared to antigen-presenting cells that express the polypeptide; a method and kit comprising properties, antibodies, inhibiting the development of P. acnes in a compression, and a method for inhibiting the development of P. acnes in a compression, and a method for inhibiting the development of P. acnes in a compression, and a method for inhibiting the development of P. acnes in a compression, and a method for inhibiting the development of P. acnes in a compression, and the compression of proteins, fusion compression, antibodies, fusion compression, antibodies, fusion compression, antibodies, fusion compression, antibodies, fusion considered that express the collapsetide are useful for diagnosing, preventing cells that express the collapsetide are useful for a p. acnes compression is useful for the sequence compression is useful for the sequence compression is useful for the sequence compression is useful for the sequence as a probes or primers for another into invention. Note: The sequence data for this patent did not form compression in the control of the printed specification, but was obtained in electronic format control of the printed specification, but was obtained in electronic format control of the control of the control of the control of the control of the control of the control of the control of the control of the

#888888888888888888888888888888888

Young PE, Soppet DR, Augustus M, Weaver Z; Carter S, Ebner ø Endress Ó Horrigan

WPI; 2002-188264/24.

Screening for anti-neoplastic agent involves exposing agent to be tested for anti-neoplastic activity, and of the expression of a gene of a signature gene set. g.cells to a chemical determining a change

Claim 1; SEQ ID NO 6458; 44pp; English.

The present invention describes a method (M1) for screening for an anticone populatic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises in indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an activity and can be used in gene therapy. M1 can be used for screening an complexitic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result composerties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, carcinoma, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, concer, infiltrating doublar cancer, squamous cell carcer, infiltrating doublar cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3144 BP; 1056 A; 676 C; 680 G; 732 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-APR-2000; 2000US-0199047P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU41313-42019 and AAU67473. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      particularly involved in the inflammatory lesions associated with acine vulgaris. A method for detecting the presence or absence of P. acines in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein the proteins of the invention and determining the amount of bound protein the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is all infections of bone, joints and the central nervous system,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACF64444;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   40026
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
```

coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lywine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                        Sequence 2000 BP; 336 A; 265 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                       illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                    This invention describes a novel isolated polynucleotide (I) containing CC at least one sequence that (i) is 70% identical with a sequence that CC encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) cC or (5); (iii) encodes a polypeptide at least 70% identical with (3) cC or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least CC or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least CC or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least CC or (5); (iv) are sequences of 753 bp (2) or 324 bp (4); (b) cC or contains at least CC one or more (I), where these are replicative DNA; (c) production of CC one or more (I), where these are replicative DNA; (c) production of CC branched-chain l-aa by fermentation of coryneform bacteria in which the CC branched-chain l-aa by fermentation of coryneform bacteria in which the CC branched-chain l-aa by fermentation of coryneform bacteria being CC used for fermentative production of branched-chain the branched-chain amino acids, CC specifically overexpressed; and (d) method for isolating the branched coryneform bacteria being CC used for fermentative production of branched-chain amino acids, cc specifically leucine, isoleucine and valine, which are useful in medicine CC probes for isolation of related sequences. Transformation with (I) CC increases yield of branched-chain amino acids. This sequence encodes the CC corynebacterium glutamicum ATCC 13032 brnF and brnB proteins described in two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1-amino acid production; brnF; brnE; branched-chain amino ac coryneform bacterium; leucine; isoleucine; valine; medicine; animal nutrition; ds.

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel nucleic acid array involving Corynebacterium glutamicum polynucleotides. The arrays are used to analyse C. glutamicum, particularly for monitoring a fermentation process to determine expression levels of C. glutamicum cellular mRNA. Such monitoring particularly differentiates between expression levels of different strains of C. glutamicum and allows the adjustment of different culture and fermentation conditions. ACA00010-ACA02188 represent C. glutamicum derived polynucleotides described in the disclosure of the

                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel isolated polymucleotide (I) containing at least one sequence that (i) is 70% identical with a sequence that CC encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) cC polypeptides; (ii) encodes a polypeptide at least 70% identical with (3) cC or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least 15 consecutive bases from (1)-(ii). The invention also describes (a) cc protein derived from sequences of 753 bp (2) or 324 bp (4); (b) cc coryneform microorganisms, especially Corynebacterium, transformed with 0 coryneform microorganisms, especially Corynebacterium, transformed with 0 cone or more (I), where these are replicative DNA; (c) production of 0 coryneform bacteria in which the 0 brnE and/or brnF genes (or equivalent sequences) are amplified, 0 cc especially overexpressed; and (d) method for isolating the brnE and/or 0 brnF genes. (I) is used for transformation of coryneform bacteria being 0 used for fermentative production of branched-chain amino acids, 0 cc especially leucine, isoleucine and valine, which are useful in medicine 0 cc protes for isolation; (I) can also be used as source of primers and 0 cc protes for isolation of related sequences. Transformation with (I) cc increases yield of branched-chain amino acids. This sequence encodes the 1 crowners of the invention of the proteins described in the corynebacterium glutamicum ATCC 14752 brnF and brnE proteins described in 1 crowners of 1 corynebacterium glutamicum ATCC 14752 brnF and brnE proteins described in 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1 crowners of 1

(I) is used for transformation of coryneform bacteria being used for fermentative production of branched-chain amino acids, specifically leucine, isolaucine and valine, which are useful in medicine and animal nutrition. (I) can also be used as source of primers and probes for isolation of related sequences. Transformation with (I) increases yield of branched-chain amino acids. This sequence encodes the Corynebacterium glucamicum ATCC 14752 brnE protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 324 BP; 60 A; 79 C; 80 G; 105 T; 0 U; 0 Other;

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-376931/40.

																				١.			

This invention describes a novel isolated polynucleotide (I) containing at least one sequence that (i) is 70% identical with a sequence that encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) polypeptides; (ii) encodes a polypeptide at least 70% identical with (3) or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least 15 consecutive bases from (i) -(1ii). The invention also describes (a) protein derived from sequences of 753 bp (2) or 324 bp (4); (b) coryneform microorganisms, especially Corynebacterium, transformed with one or more (I), where these are replicative DNA; (c) production of

Claim 5; Page 16; 23pp; German.

New export genes from coryneform bacteria, useful for increasing fermentative production of branched-chain amino acids.
